

600mm (w) x 250mm (h) Header Panel

This guide outlines measurements for printed posters to fit exactly on our display boards.

Each display board panel is a certain size. However, because of the width of the frame each side, posters to fit the whole panel need to be slightly smaller than the overall panel size.

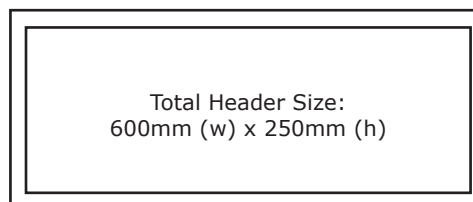

The size of the poster also depends on which side of the board the poster is for. One side of the display panel has a recessed frame to allow graphics to fit flush within the frame. On the reverse of the panel the frame is not recessed. The frame width is different depending on whether it is recessed or not.

The recessed side of the frame allows you to keep posters or artwork in place between uses. This makes setting up the display board quicker, and is ideal for frequent users.

Recessed side: Frame width = 6mm each side. For poster to sit flush within the frame it needs to be 12mm smaller each way.

Reverse side: Frame width = 15mm each side. For poster to sit flush within the frame it needs to be 30mm smaller each way.

Please see below for poster measurements for our Standard Display Board Header Panel.

Header Size	Max Poster Size (Recessed Side)	Max Poster Size (Reverse)
600mm x 250mm	588mm x 238mm	570mm x 220mm
