

# HOW TO CARE FOR YOUR

## MAINTENANCE

If your X-GLOO is losing pressure, please check all valves to ensure they are tightened – this should avoid any further loss of pressure.

The over pressure valve can get clogged when used frequently which will release air. To avoid this clean out the valve or alternatively replace with a new one.

Use warm water and a soft brush to clean the X-GLOO tent. Alternatively use a mild alkaline solution and a cloth for optimal cleaning.

Do not use solvents, washing machines or steam cleaning - this will damage the PU coating and re-waterproofing is not possible.

The X-GLOO should be periodically inspected for chafe marks or damage and should be promptly repaired.

To prevent the zips on the walls from ripping please ensure that the webbing loops are used to strengthen when in use.

## STORAGE

Avoid pressure spots when dismantling your X-GLOO, for example do not kneel on the tent while folding.

Store the X-GLOO in a dry location and at temperatures not exceeding 40°C.

Do not pack or store the X-GLOO in moist conditions - this can cause mould spots and discoloration.

In temperatures lower than 0°C, folding under pressure can lead to damage. Take special care with the window walls in low temperatures and pack them carefully.

Do not store the X-GLOO in a car in direct sunlight. The intense heat can cause the window elements to stick together irreversibly, or may cause permanent damage to the cloth.

All elements of the X-GLOO must be stored in dry conditions. If the elements are stored whilst damp, the digital printed material can become permanently damaged.

## SET-UP

Spread the X-GLOO out evenly before set up, this will make inflation easier and faster.

Position the leg ends approximately where you want the X-GLOO to sit, this prevents any unnecessary movement once inflated.

Check the over pressure valve is working before inflation. To do this unscrew the housing and check that the spring can be pushed in.

Do not exceed the specified maximum air pressure when setting up the X-GLOO.

The X-GLOO Inflatable event tent is not intended for long-term outdoor use and should be inspected for wear or damage after every event.

If small folds form inside the tubes when inflating, gently shake the tube during inflation. This will help keep the inner bladder in the correct position.
