

The WeatherShield freestanding showcase takes a contemporary, sleek new design outlook on the traditional bulky and plain outdoor showcase. The lightweight aluminium frame, which can be purchased in various colours, adds a degree of fun and excitement to a product which the eye can often overlook. The profile of the aluminium was carefully designed to combat the elements, as well as being customisable so that a group of showcases could all be unique.

WeatherShields internal double rubber seal adds an extra barrier against potential water ingress, and the double locks on the frame add security to the items on display, as well as the WeatherShield itself.

**Frame:** The door and the backboard frames have been expertly designed especially for the WeatherShield using recycled aluminium. The structure of the extrusions make them rigid and aesthetically pleasing. The sides are joined together by corner caps and brackets to give a solid structure. This is available in five different colours, and seven different sizes.

**Posts:** Sturdy aluminium grey powder coated legs are supplied as either sunken posts or for surface mounting to customers pre-formed concrete base

**Corner Caps:** The door corner caps have been designed to continue the flowing shape of the frame and have been branded to show the identity of the product. The internal caps have been injection moulded to slot tightly into the frame extrusions to give it maximum rigidity, and are manufactured from UV resistant Polypropylene. The colours match the frame, except the anodised aluminium which has a charcoal cap.

**Backing Board:** The backboard is 8mm thick PVC board, which ensures a maximum level of water resistance. The felt cover is available in a selection of colours which can be chosen by the customer to personalise the product.

The 3mm clear PETG sheet is shatter proof.

Dimensions	Width (mm)	Height (mm)	Depth (mm)
9 x A4	780	1031	70
12 x A4	1005	1031	70
15 x A4	1220	1031	70
18 x A4	1423	1031	70
