

QUALITY FEATURES

X-GLOO Event Tents are water proof. The roof seams are fused with sealing tape and the zippers are covered by a zipper rain cover.

All cloths have been carefully selected and have undergone extensive testing. The material has a UPF (Ultraviolet Protection Factor) of over 50 and achieves the light fastness standard level 5-6 according to DIN EN ISO 105-B02.

X-GLOO Event Tents in the sizes 4x4, 5x5, 6x6 and 8x8 can stand up to wind speeds of up to 60 km/h when properly tensioned and anchored – this has been proven by tests undertaken in a professional wind tunnel.

Side Walls, Tunnel Parts and Canopies can be quickly and easily zipped on and off with the premium YKK zippers (conform to Öko-Tex Standard 100). The roof and tubes can individually be disconnected, exchanged or replaced. The reversible element zippers make it possible to attach the walls with branding facing inwards or outwards.

X-GLOO tents represent the highest quality and functionality in design and construction. These qualities are reflected in important details such as the robust and durable materials. X-GLOO Event Tents are component-specifically tested according to DIN 4102-B1 – abbrev.:B1 (regulates testing and requirements on the fireproofness of construction materials and components. German national norm, also used within most European countries.)CPAI 84 Norm (specification of the American Association of Sailcloth Products for the evaluation of flameproof materials used in tents.)
